

SITUATION

Planning, coordinating, delivering successful ORs.

The US is in the midst of the most dynamic period of hospital construction since the 1970s. This growth is leading to larger, more complex construction projects, shorter timelines and more investment risk for hospitals.

Nevertheless, most hospital managers assigned to these large, complex renovation/expansion projects lack the time and in-depth project management experience to ensure adherence to schedules, budgets and delivery of desired outcomes.

AS HOSPITAL MANAGER

- Do you have a plan to avoid project delays and shortcuts?
- Is there a sufficient interface between the building structure specifications and the OR design and specifications?
- Is there a process in place to limit the number and cost of change orders?
- Is there adequate orchestration between all building project team members (i.e. engineers, equipment planners, general contractor, capital vendors, etc.)?
- Will project oversight prevent cost overruns and project delays?

BERCHTOLD's Project Management ensures a YES to all questions above.

“The BERCHTOLD team is consistent with a positive, highly responsive, and experienced approach, which is helping [our] complex project stay on target.”

David Daterman
Daterman Project Management, LLC
OHSU Center for Health & Healing
Portland, Oregon

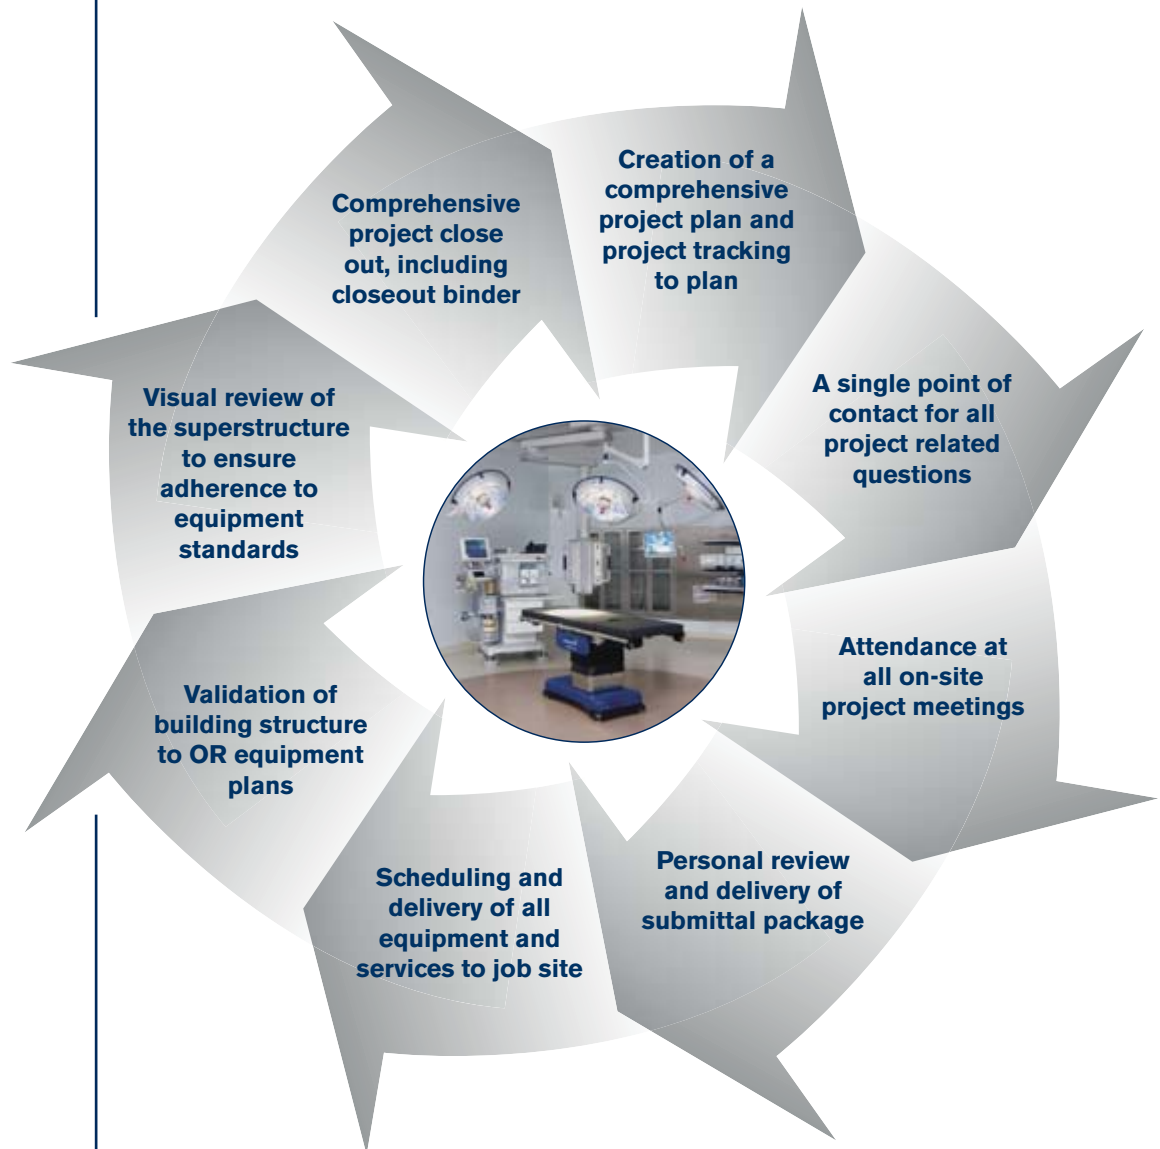

“BERCHTOLD Project Management offers a single contact to get the job done right, on budget and on time.”

Gerard Wolfe
Director of Project Management
BERCHTOLD Corporation

PROJECT MANAGEMENT

HOW WE DO IT

BERCHTOLD Project Management ensures that your project gets the oversight and management it deserves to deliver the OR you demand on time and on budget.

“Thank you for going beyond the call of duty and meeting the shipment and managing the logistics. All of your ‘on-site’ coordination was essential in keeping the project on track.”

Jennifer Boynton Smith
Cardiovascular Director
Maryview Hospital
Portsmouth, Virginia
